General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

This is an inappropriate attack on free speech. Perhaps you could be as vigilant in prosecuting criminals as you seem to be in trying to impact law abiding citizens!

General Comment

To whom it may concern:

Please note, before reading a more flowery, possibly polite version of comment, the following. You might think about it too. Who is the dummy or dummies who perhaps in the throws of a "wet dream", brainstormed this particularly stupid idea together? The more flowery version follows immediately below, but pay particular attention to my Plain English version.

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This

means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Thank you,
Larry Nicholson

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

Apparently you people need a reminder of the supreme law of these United States. That would be the Constitution.

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

Notice the key words, "...abridging the freedom of speech..."

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Submitter Information

Name: Gerald Brickwood

Address:

400 Moran Rd.
Little Meadows, PA, 18830

General Comment

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet. The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by this or any other administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to cancel these new regulations in their entirety. The idea of a Department that is supposed to represent US to the world using the First Amendment to suppress the Second Amendment is despicable!

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the changes imposed by the State Departments arms control regulations (ITAR), which would potentially grant the State Department the power to monitor and control gun-related speech on the Internet.

Language such as making technical data available via a publicly available network (e.g., the Internet) -- would put anyone who violates this provision in danger of facing decades in prison and massive fines.

Posting information on virtually any firearm or ammunition could be defined any current or future administration as requiring, not only government permission, but potentially a government license. This violates constitutionally protected free speech.

Further, I oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printed plans for firearm related files.

I urge you to repeal these new regulations in their entirety.

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the

State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) --

could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring,

not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments

are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Obamas State Department Could Gag Firearms Communications over the Internet

Created: Friday, 12 June 2015

Written by Gun Owners of America

Not a GOA member yet? You can join Gun Owners of America today for a mere \$20!

A rewrite of the State Departments arms control regulations could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The State Department is updating the International Traffic in Arms Regulations (ITAR) and has amended the existing regs to include making technical data available via a publicly available network (e.g., the Internet).

This restriction on Internet speech is wholly new language and puts anyone who violates this provision in danger of facing decades in prison (up to 20 years) and massive fines (up to \$1 million).

The language is so broad that it could potentially include virtually any gun-related communication of a functional how to nature.

The language includes (1) non-automatic and semi-automatic firearms up to .50 caliber; (2) automatics up to .50 caliber; (3) other firearms of special military application; (4) shotguns with a barrel length less than 18 inches; and (5) components, parts, and ammunition for all of these.

In other words, electronically posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license.

And again, violators would potentially face significant criminal penalties.

Revised definitions could license (a.k.a., ban) 3-D printers

Another threat to gun rights is found in the revised definition of defense article, which has been redefined to be any item, software, or technical data....

So posting certain gun-related software to the Internet would first require a license -- and a huge license fee. While the term software is new, the State Department contends that this is a mere tweaking and represents no substantive change.

But if theres one unbreakable rule in politics, its that, when drafters take the time and effort to add a provision to the underlying text, it is never, never, ever without reason.

And if theres a second unbreakable rule, its that the drafters will inexorably lie and say theyre only codifying current law.

What software should we be concerned about? Well, to start with, 3-D printer programming almost certainly falls within this category and these regs seems to be an effort to outlaw this technology by executive fiat.

San Antonio gun author Nick Leghorn, who writes for The Truth About Guns, predicts an end to Encryption programs like TrueCrypt as well as 3D models of firearms....

There is much more thats involved with these regulations, and you can read about it in greater detail here.

ACTION: You can submit comments to the State Department in opposition to the proposed arms control regulations by going here. Simply cut-n-paste the text below into the online comment box. And if you wish to read the State Department regulations, you can do so here.

----- Pre-written letter to the Department of State -----

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by any administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties for mere exercising of 1st amendment rights.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

These regulations would restrict both the First and Second Amendments and are, as such, unconstitutional.

Comment on DOS-2015-0023-0001

Submitter Information

Name: Capron Illinois

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the current administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Please respect all of the rights of the United States citizens, including the right of free speech and the right to keep and to bear arms.

This is the United States of America and we are to be the land of the free. Start following the Amendments for America and quit trying to put your own private agendas through and forcing them down all American peoples throats! This is wrong and you know it!! The writers of our great Amendments knew what they were doing so, follow their leadership as it was the greatest ever!! Your leadership is woefully lacking and you are working for yourself and not our Country. Please wake up and follow the will of the people who live here! The people are speaking and your are ignoring them. Listen to the people!! AGAIN, THE FIRST AND SECOND AMENDMENTS ARE THE LAW OF THE LAND!!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Joshua Cleveland

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Joshua Cleveland

This is a First Amendment issue, and regardless of what you might think, we aren't living in China, where common knowledge and technical information such as firearms info, or any other technical data, is controlled.

These new regulations seek to infringe upon the 1st Amendment, and that is a very dangerous thing.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Carol Ehlers

General Comment

To whom it may concern:

I totally oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

Repeal these new regulations in their entirety; whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To the State Department in charge of ITAR:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

Rest assured, I am NOT a "gun nut" nor militia member. In fact, I am a board certified surgeon.

Action such as this violates First amendment rights.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: William Hodge

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Thomas Benson

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Jeffrey Lindquist

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Jon Winters

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Jon Winters

Comment on DOS-2015-0023-0001

Submitter Information

Name: Ryan Reeves

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

Ryan Reeves

Comment on DOS-2015-0023-0001

Submitter Information

Name: Irwin Schaefer

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

There is a lot of speculation in the press regarding this proposed rule. Due to the significant technical language (which I would consider obfuscatory), it is difficult to determine what would be restricted under this rule. I think clarification in normal language should be provided to make it clear what is being restricted from dissemination. If technical specifications or plans are created under direct contract with the government on a classified project, then I agree that those plans or specifications should be restricted from dissemination, but should be obviously classified as such. However, if a person or company provides details on a product they designed independently, or makes commentary or reviews of products that are available for public sale legally in the US, that data should not be restricted. Any restriction of such activity would be an abridgment of their first amendment rights. For example, the 3D printing plans for creating a gun by Defense Distributed should not be restricted by ITAR. These plans were not created under government contract for a classified project, and were independently developed. Restriction of dissemination of this material is an offense to the creators' first amendment rights. Furthermore, it ridiculous to think that with today's technology, you can stop dissemination of technical details of publicly available products. This includes plans of weapons available on the free market, detailed reviews of such items, encryption software that is available on the free market, or any other item that can be freely purchased in the U.S.

I certainly hope that this administration is not trying to use this proposed rule to restrict peoples' first amendment rights.

General Comment

I understand that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances." That does not however make it okay for a cabinet level department in charge of "international" relations to subject the citizens of the United States to an interest balancing test for exercise of their liberty.

While I am sure there are smarter people than myself that can tell me all the foreign relation issues that might arise from talking about firearms, ammunition, or distributing 3d printer files online, those possibilities pale in comparison to the impact I would feel with the muzzling of free speech. Perhaps, the state department should focus on fixing their mission disasters such as Benghazi, Fast and Furious, Russia, and their current handling of ISIS before they attempt to become the internet speech police. These proposed regulations, just like the attempt at regulating ammunition, is a deplorable abuse of the powers that come with the Office of the President. Worse, we are conceding freedom long fought for and enshrined to people that don't even pay taxes here!

My simple answer to your proposed regulation for ITAR is; this is garbage and you know it. Thus, if you enact these regulations, I will NOT personally comply in any instance where you abridge the compact made between this country and her citizens with respect to the liberty protected by the Bill of Rights; in this instance BOTH the 1st and the 2nd amendments.

In conclusion: I am opposed to these regulations.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments ITAR policy, which could potentially grant the State Department an over reaching power to monitor and control gun-related content on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines. This is a blatant violation of the first amendments freedom of press.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still God given rights!

General Comment

To Whom It May Concern: I understand that you are accepting comments on this proposed rule (on International Traffic in Arms: Definitions of Defense Services, Technical Data, and Public Domain; Definition of Product of Fundamental Research; Electronic Transmission and Storage of Technical Data; and Related Definitions) until August 3, 2015. As such, I am submitting my below comments for your review, consideration, and inclusion in the record.

1) As a general remark, your rule should be revised so that it does not have the effect of "censoring the maker." The maker culture in America long predates the use of electronic transmission and storage of technical data and 3-D printers which tend to get media attention. Specifically, it has been long-standing legal precedent in the United States that if a person makes a weapon in their home for their own purpose, the receiver that the person makes (and the weapon that the person finishes) need not be serialized or registered and it is legal insofar as it is not transferred to another person (no sale to another person nor any sort of transfer to another). From a civilian use standpoint, to make a weapon in this context (in the recent past), this is often done beginning with an "eighty percenter" kit which does not involve electronic transmission and storage of technical data in the process, but in the case of use of 3-D printers, which involve printing out something from scratch rather than ordering a kit, would necessarily involve "electronic transmission and storage of technical data." The 3-D printers are a wave of the future - that's where it's all going, you simply can't stop this stuff - and it is a reactionary move to "censor the maker" and attempt to restrain the maker's use of his or her tools. Better you just deal with it and learn how to integrate them into a "permissionless innovation" process, as the US government is already clamoring to increase the use of 3-D printing technology anyway, and hindering it isn't going to help.

2) While anyone can "run plans" to accomplish the finishing from an eighty-percent complete receiver to one hundred percent complete with a simple jig that can be bought online from any one of a number of manufacturers (and finished off with a router or drill press ~ and do not involve electronic transmission and storage of technical data), there are vital elements which make it important that you should not create legal obstacles for people to do the same thing from a 3-D printer with electronic plans (which involve electronic transmission and storage of technical data).

One of them is simple, you want to maintain permissionless innovation. number two, you want to ensure that the constitutional right to keep and bear arms is not infringed and that people remain able to use modern technology to build (as they have in the past, but using the technology of today) a weapon for personal use in their home, without regulatory restraint, and three, the infeasibility and utter ridiculousness of exposing people (a lot of people!) to a gigantic new and serious proposed set of penalties which correspond to any violations of this rule were the proposed rule to become final, is, as I've mentioned, just ridiculous. None of what is being proposed is worth pursuing people over or putting anyone in jail over. Period.

3) As part of all this, the proposed rule suggests that the current text of 120.6 be made into a new paragraph (a), into which software would be added to the list of things that are a defense article because software is being removed from the definition of technical data. I profoundly disagree with the categorization of software as a "defense article" and the militarization of the notion and concept of software. Similarly, I am opposed to the Department's proposal to revise the definition of technical data in ITAR 120.10 to "update and clarify the scope of information that may be captured within the definition" (...) defin(ing) technical data as information required for the development, production, operation, installation, maintenance, repair, overhaul, or refurbishing of a defense article, which harmonizes with the definition of technology in the EAR and the Wassenaar Arrangement." I am opposed to this portrayal of software as proposed. The proposed rule also suggests, "Paragraph (a)(5) of the revised definition defines technical data as also including information to access secured technical data in clear text, such as decryption keys, passwords, or network access codes." This is completely unnecessary and I oppose such a revised definition. Finally, the revised definition of the public domain is unacceptable as it places far too much authority in the hands of the US government regarding software and what would be considered technical data.

In sum, I suggest that this proposed rule be scrapped entirely. It offends the heart and mind. Retract it in full and start over completely.

General Comment

To whom it may concern: I strongly oppose the the rewrite of The State Department arms control regulations (ITAR), Which could potentially grant the Obama Administration to much power over free sp

The definitions of what gun-related information cannot be "exported" without the approval of the State Department are already very broad.

But what is missing is a broad definition of "export" that would actually allow the Obama administration to move and take advantage of this regulatory infrastructure.

And what these regulations would do is define "export" to include potentially any gun-related communication on the internet or social media.

With this final keystone in place, the Obama Administration would have the regulatory framework to comprehensively regulate gun-related speech in cyberspace, to whatever extent it desires.

Changing Definitions

The definition of what communication is an "Export" that triggers the requirement of the State Department approval is expanded dramatically in these regs.

The term "export" would be expanded "making technical data available via a publicly available network (e.g., the internet)" This is wholly new language.

NOTE, that anyone who did this could face decades in prison and massive Fines.

NOTE, further, what this provision does and does not say. It does not require that technical data be made available to the public for illegality to occur. It applies to all private communications, so long as the "network"(e.g., the internet) is, in general, publicly available.

Thus, any electronic communication concerning gun-related "technical data" would potentially subject the sender to these significant criminal penalties.

That said, it is alarming enough that the obvious of this paragraph is to give the Obama administration authority to comprehensively regulate gun-related speech on the internet.

So the next question is: Given that the proposed regulations would more clearly grant the Obama Administration the power to regulate gun-related speech on the internet, how broad would its mandate be?

The answer is that, based, in part, on preexisting definitions, that the power would be very broad indeed.

Broadening the Concept of Gun-Related Speech to be Regulated.

The definition of "technical data" which would be Regulated

The definition of "technical data" which would require government permission in order to be posted on the Internet, in part:

i could go on with technical of this International Traffic in Arms and Definitions of Defense services.

The new language-which includes making technical data available via a publicly available network(e.g., the internet) could put anyone who violates this provision in danger of facing decades in prison and massive fines.

i also oppose the addition of the word software into these regulations, as appears to be a not-so-veiled to ban 3-D printers.

I urge you to repeal these new regulations in their entirety ,

Whether you know it or not, the First and Second Amendments are still the LAW OF THE LAND !!!!!!!

Comment on DOS-2015-0023-0001

Submitter Information

Name: DANNY THOMAS

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Danny Thomas

General Comment

To the State Department:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

Posting information on virtually any firearm or ammunition could be defined by any administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it could be stretched to ban 3-D printers.

I urge you to repeal these new regulations in their entirety to stay within the spirit and letter of the First and Second Amendments to the US Constitution.

Sincerely,

Submitter Information

Name: RUSSELL SCHUCKERT

Address:

520 PAULINE CT

CUYAHOGA FALLS, OH, 44221

Email: gambit_1961@att.net

Phone: 330-929-8823

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Russell Schuckert

General Comment

While I believe this regulation is intended to target those who are endeavoring to build their own firearms, e.g. 3D printing and the like, a subject that in and of itself is a topic of debate, it would appear that this proposal also would preclude members within legal gun clubs from sharing information to help others maintain and legally modify their personal firearms.

I would like to ask that this be considered carefully as this proposal appears to target Americans who wish to legally share firearm knowledge with other like minded individuals in various electronic forms.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
JD

Last time I checked, this was the United States of America and NOT Nazi Germany, we have the Second Amendment to the United States Constitution that gives US the freedom to bear arms. The First Amendment also grants US the right of FREE SPEECH, which this UNCONSTITUTIONAL attempt VIOLATES!

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Richard DeSpain

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

Richard DeSpain

General Comment

To whom it may concern:

I strongly oppose the Proposed rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging authority and power, to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

The language is so broad that it could potentially include virtually any gun-related communication of a functional how to nature.

In other words, electronically posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license.

And again, violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

General Comment

To the Government of the United States...

MY Government as a United States, Law Abiding Citizen. I am using my voice, my right, to state that I strongly oppose the rewrite or clarification of the rules relating to your overhaul of the ITAR in regard to the AECA.

While WE THE PEOPLE do expect our ELECTED GOVERNMENT OFFICIALS to ensure our safety and the safety of our citizens, country, information, etc. IT SHALL NOT BE AT THE EXPENSE OF OUR RIGHTS AND FREEDOMS AS AMERICAN CITIZENS as outlined in the CONSTITUTION and BILL OF RIGHTS.

Specifically, the proposed new definition of defense article , the addition of the word software, the ban on 3-D Printed Gun Files Online are all violations of our RIGHT to FREEDOM of SPEECH. There are ways to ensure our safety WITHOUT taking away the RIGHTS of American Citizens.

Additionally, the proposal that WE THE PEOPLE must apply for, wait, receive APPROVAL (to exercise our already provided for RIGHT of Freedom of Speech, and then pay excessive fees to do so is a violation of our FIRST, SECOND and EIGHTH AMENDMENT RIGHTS. Our Country was founded on these principles and WE will NOT see them stripped away one by one.

Congress shall make no law abridging the freedom of speech, or the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances. First Amendment

This Amendment guarantees our right to express and to be exposed to a wide range of opinions and views. It was intended to ensure a free exchange of ideas EVEN if the ideas are unpopular, or if our Government does not bless it. It also guarantees our right to physically gather with a group of people to picket or protest; or associate with others in groups for economic, political or religious purposes. Additionally, it guarantees our right to petition the government for a redress of grievances.

A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed. Second Amendment

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted. Eighth Amendment

This Amendment protects WE THE PEOPLE from having bail or fines set at an amount so high that it would be impossible for all but the richest defendants to pay and also protects people from being subjected to cruel and unusual punishment.

Thank you for your time and attention.

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), and I oppose your attempt to control gun-related speech on the Internet.

I oppose your attempts to put anyone using their first amendment rights who violates this provision in danger of facing criminal charges with penalties of decades in prison and massive fines.

Posting of information on firearm or ammunition in accordance with past practice shall not be infringed upon. The Obama administration is changing law circumventing Congress and should be impeached.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety as this is a blatant attack on US first and second amendment rights.

Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Derek Vasselin

Address:
SC,

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually

any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Anonymous Anonymous

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Comment on DOS-2015-0023-0001

Submitter Information

Name: Ryan Montoure

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Concerned citizen

To whom it may concern:

Why is the State Dept getting involved with firearms Regulations? The 1st Amendment allows for unfettered speech, even if you don't like it, that's not your call.

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

General Comment

To whom it may concern:

The rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet, is thoroughly unconstitutional, and I thoroughly oppose it.

Anyone who violates this regulatory provision is in danger of facing decades in prison and massive fines, thanks to the new language -- which includes making technical data available via a publicly available network (e.g., the Internet).

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers, which I see as a vital force to streamline our economy.

These new regulations must be repealed in their entirety. The First and Second Amendments are still the law of the land, and there's no point in crippling our economy.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which would directly infringe the right to freedom of speech regarding gun-related content on the Internet.

The new language -- which includes requiring pre-approval before making technical data available via a publicly available network (e.g., the Internet) -- is draconian and unacceptable. I will not subject my speech to governmental pre-approval.

Online posting of information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers, design software, and computer numerical control (CNC) technology.

I urge you to repeal these new regulations in their entirety.

Thank you,

Submitter Information

Name: Robert Johnson

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

This yields posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties. This is not my America. This is censorship, opening the door to oppression. In his incessant attacks on the Second Amendment, President Obama has now decided to attack the First alongside it, and this behavior is completely unacceptable. I encourage you to look at the nations of the world that censor speech on the internet - Russia, the People's

Republic of China, and North Korea to name a few - and ask yourself if they are the countries whose footsteps America should follow in.

I also oppose the addition of the word software into these regulations, as it appears to be a blatant effort to ban 3-D printers. I am an engineering student at the University of Texas at Austin, and while I am no expert I can assure you wholeheartedly that 3-D printing is the future of manufacturing, perhaps even a second Industrial Revolution. The aim of this attack on 3-D printing is no doubt rooted in the proliferation of CAD files for the Liberator, the printable pistol designed by Defense Distributed which plastered headlines in 2013. This is an incredibly shortsighted maneuver on the part of the Obama administration. Printable firearms are only one application of 3-D printing, and in the mean time I'm not sure they even can be; printable polymers simply lack the strength of the polymers used in mainstream firearm production. To the contrary, the most important application, in my opinion, is in fact the health industry. Here at UT Austin and all over the world 3-D printing technology is being used to make splints and casts of various types, models of patient's body parts taken from molds, and even prosthetic limbs. This progress is revolutionizing parts of the medical field, and needs the freedom to grow further. However, President Obama has taken it upon himself to pursue gun control with a blood lust, and has lost sight of the collateral damage he is causing with his numerous, questionably constitutional executive orders. Please do not allow him to place a stumbling block in the path of progress in the name of his political agenda.

I urge you to repeal these new regulations in their entirety. The First and Second Amendments are still laws of the land, and our President has either forgotten this reality or he has no respect for it.

Sincerely,
Jeremy King

Comment on DOS-2015-0023-0001

Submitter Information

Name: Alan McNutt

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

Robert Keeler

Berthoud, CO, 80513

General Comment

To whom it may concern, Senators, Congressmen, representatives:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which would grant the State Department vast over reaching power to monitor and control gun-related speech on the Internet. (ITAR is already an over reach of government intervention that has absolutely no use in defense of the country. It is a veiled political weapon only).

The new language, which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines. This is a first amendment violation.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to immediately repeal these new regulations in their entirety.

Thank you,

Comment on DOS-2015-0023-0001

Submitter Information

Name: Stephen Smith

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,

William Manning

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land.

Sincerely,
Joseph Weber

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet. Rewriting "regulations" by those who will enforce those regulations debases us from "a government by laws to a government by men." You can take whatever license with words that you choose to create any meaning you desire, rather than the intent of laws as passed by Congress.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet. I believe it violates both the First and Second Amendments to our Constitution.

Anyone who violates this regulatory provision is in danger of facing decades in prison and massive fines, thanks to the new language -- which includes making technical data available via a publicly available network (e.g., the Internet).

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers, which I see as a vital force to streamline our economy.

These new regulations must be repealed in their entirety. The First and Second Amendments are still the law of the land, and there's no point in crippling our economy.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

General Comment

The only reasonable answer to this proposal is "no."

The State Department doesn't get to control press or speech, online or off.

You don't have to like it. That's how it is whether you like it or not.

The following, intended to be incorporated into this comment, is an op-ed (for newspaper publication) which I just wrote:

Speech and Guns: Freedom is Indivisible
by Thomas L. Knapp

A few years ago libertarian novelist and essayist L. Neil Smith wrote a prescient piece on victim disarmament (called, by its supporters, "gun control"). Smith is a prescient guy -- he also predicted, among other things, the digital watch and the fall of the Soviet Union. I can't find the piece at the moment, so I'll paraphrase:

It's impossible to effectually outlaw guns without also outlawing writing, speaking and thinking about guns. And it's impossible to effectually outlaw writing, speaking and thinking about guns without outlawing writing, speaking and thinking, period.

Thinking isn't a strong suit among victim disarmament advocates, but I guess one of them read the article. A couple of years ago, the US State Department ordered Cody Wilson of Defense Distributed to remove 3D printing files for the "Liberator" pistol from the Internet, pending a ruling on whether the posting of those plans constituted an illegal "weapons export." In early June, the US State Department filed a new rule proposal on the Federal Register.

The rule is in a combination of bureaucratese and technical jargon, but it boils down to the US government requiring anyone who wants to publish "technical data" on the Internet (where it can be downloaded by foreigners, making it an "export"), relating to how to build weapons, to get the State Department's permission.

We've been around this tree before. Back in the 1990s, the government went after proponents of "strong crypto" for making their software available globally, treating cryptographic algorithms as "munitions" for "export" purposes. Hilarity ensued as cypherpunks arrived at airports wearing t-shirts with the following three lines of Perl on them:

```
#!/bin/perl -sp0777i<X+d*IMLa^*IN%0]dsXx++IMIN/dsM0<j]dsj
$/=unpack('H*',$_);$_=`echo 16dio\U$k"SK$/SM$n\EsN0p[IN*1
lK[d2%Sa2/d0$^Ixp"|dc`s^W//g;$_=pack('H*',/((..)*$/)
```

Those three lines of code implemented the RSA cryptographic algorithm. Which meant that flying abroad wearing the t-shirt constituted "unauthorized export of a munition."

The government ended up backing away from that battle. As a result, all of us now have relatively easy access to tools that help us protect the privacy of our information. Now they're back, trying to throttle free speech in the name of "arms proliferation control" abroad and, implicitly, "gun control" here at home.

The right to think, speak and publish as we please is inseparably linked -- both morally and practically -- to the right to keep and bear arms. It's impossible to support one without supporting the other. And as we can see, the State Department now intends to destroy the latter by destroying the former.

The required "comment period" runs through August 3rd. You can read the proposal and register your opposition to it at:

<http://www.regulations.gov/#!documentDetail;D=DOS-2015-0023-0001>

If legal opposition doesn't work, the necessary next step is open defiance. This is not a battle Americans can afford to lose.

I strongly oppose this rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control software- and gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines. For telling someone how to make a 3d printer? Or how to load a firearm they legally own?

So posting information on virtually any 3d printer part, firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety and please stop trying to weave around the Constitution.

Thank you,

General Comment

To whom it may concern:

The rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet, is unconstitutional, and I thoroughly oppose it. Any infringement on our First Amendment Rights is unacceptable. One can not pick and choose which speech (written, verbal, electronic, etc) is acceptable and which is not, that in itself flies in the face of why the First Amendment was written.

Anyone who violates this regulatory provision is in danger of facing decades in prison and massive fines, thanks to the new language -- which includes making technical data available via a publicly available network (e.g., the Internet).

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers, which I see as a vital force to streamline our economy.

These new regulations must be repealed in their entirety. The First and Second Amendments are still the law of the land, and there's no point in crippling our economy.

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

As a citizen and armed service veteran of the United States, I strongly oppose the proposed rewrite of the State Departments arms control regulations (ITAR). Changes as found in the current proposed rules could potentially grant the State Department wide-ranging powers to monitor, control and hence penalize innocuous gun-related free speech on the Internet.

The new language under consideration would interpret the posting of any and all technical data via a United States public network (e.g., the Internet) -- as a violation of this provision and places said individual, group or organization in danger of facing litigation by the full fury of the United States Government.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. As an example, the mere act of a fathers boast in the blog of your choice on the dimensions of their child's shot groupings is performance data hence dissemination of technical data via an unsecured communication domain accessible by foreign entities. Thus making such free speech subject to significant criminal

penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I do not support adoption of the proposed rule change and urge repeal of these regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land. Thank you!

General Comment

The attempt to hallucinate a new definition to "exports," thereby outlawing the free speech to discuss and share information on firearms and Cody Wilson's 3-D gun blueprint/download for "The Liberator," if a joke.

Do you really think that Americans are so stupid as to believe this? Do NOT outlaw free speech and Mr. Wilson's 3-D gun blueprints. Guns are here to stay. The technology exists and you cannot magically erase it.

The proposed rule under discussion is blatantly illegal, and it is so obvious that the US Dept of State is becoming an embarrassing joke. Save what little integrity the Dept still has and do not enact this rule. Thank you.

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

All citizens must obey the laws. Enforcing laws on the American citizens while disregarding constitutional rights is wrong. It's especially wrong when thousands upon thousands of illegal immigrant criminals are released upon the USA streets and millions more more freely break the laws of the land , yet the law abiding legal citizens constitutional rights to freedom of speech and self protection could become punishable offenses. That's wrong. I hope you will be wise to not take away our constitutional rights. Especially now when our own government DOJ was trafficking weapons last year to the drug cartels in Mexico. Please don't punish the USA citizens when there's so much lawlessness and corruption that is never punished but rewarded. That's wrong. Please keep our constitutional rights in order

Thank you for considering the American citizens & our constitutional rights.

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone else agrees or not, the First and Second Amendments are still the law of the land!

That's it!

I'll keep you informed of our progress with this matter as we continue to fight these Gun Grabbers!

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet and bypass the powers of Congress to make laws and protect Constitutional rights. These new "regulatory rewrites" seriously infringe upon every U.S. Citizen's first AND second amendment rights.

The new language, which includes making technical data available via a publicly available network," puts anyone who violates this very broad regulatory language in danger of facing criminal prosecution, decades in prison and crushing fines.

Posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring not only government permission, but also potentially a government license, and violators could face serious criminal penalties for exercising the Constitutional rights guaranteed for all citizens.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them, as well as any other software for use in manufacturing ammunition or firearms by private persons - or anyone, for that matter.

I urge you to repeal these new regulations in their entirety because, whether you or anyone else agrees or not, the First and Second Amendments are still the law of our land! Allowing such arbitrary rules to function as laws will ultimately bring on costly, time consuming litigation throughout the federal court system.

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

I urge you to repeal these new regulations in their entirety and rewrite them.

I will also write my Congressmen alerting them that this is alarming to me and poses a threat to civil rights! I find this type regulation to be offensive for an American to have our government see the 2nd Amendment right to bear arms as a threat, it is a right. I do however feel the obligation to follow laws and stringent safety. We are not the enemy.

Sincerely,

PUBLIC SUBMISSION

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone else agrees or not, the First and Second Amendments are still the law of the land!

General Comment

I have a serious concerns about these changes, specifically, the "clarification" of the term "Technical Data" and the revision to the definition of "Public Domain." The concerns I have are founded in the changes to what qualifies as "technical data" and what requirements are put on the any data that would be considered "Public Domain." The chief concern here is that common citizens exercising their 1st Amendment rights via the internet could be found to be violating ITAR simply because the internet could be deemed to be a method of distributing/exporting the technical data internationally. Additionally, I am concerned that these changes censor the producers of firearms and, thereby, restrict what can enter the Public Domain, effectively circumventing free speech. It also appears that the changes would effect the distribution of 3D-print plans for firearms that would enable widespread public production of the firearms - if it does or is intended to, then the Congress should establish Laws concerning this and the DOS should not modify Government code to effectively write law concerning this issue.

Changes of note:

1. Paragraph (a)(1) of the revised definition defines technical data as information required for the development, production, operation, installation, maintenance, repair, overhaul, or refurbishing of a defense article
2. The requirements of paragraph (b) are not new. Rather, they are a more explicit statement of the ITAR's requirement that one must seek and receive a license or other authorization from the Department

or other cognizant U.S. government authority to release ITAR controlled technical data, as defined in 120.10. A release of technical data may occur by disseminating technical data at a public conference or trade show, publishing technical data in a book or journal article, or posting technical data to the Internet. This proposed provision will enhance compliance with the ITAR by clarifying that technical data may not be made available to the public without authorization. Persons who intend to discuss technical data at a conference or trade show, or to publish it, must ensure that they obtain the appropriate authorization.

Information on firearm maintenance, repair, installation of parts/modifications, refurbishing the weapon, and certainly the operation of the weapon are all things that should be freely allowed to be distributed over the internet per the 1st amendment. I, and any other firearm owners or prospective owners, need technical specifications and other information to make informed buying decisions and to have access to training materials for proper upkeep, repair, and usage of our firearms. Any legislation that prevents firearms manufacturers from releasing to the public any specifications on their firearms without government consent effectively prohibits free speech because it controls what enters the "Public Domain." Furthermore, preventing those people with knowledge of these specifications from disseminating that information on the internet, though it may be gained through their LEGAL experience in use and/or ownership of the firearms and not a technical manual, directly prohibits the free speech of any US citizen that wishes to speak about a firearm. Concerning any firearms that US Citizens may legally obtain (Upon which, there should also be no limit), there should be no statute that prevents a person from stating their own opinions about the use of a firearm, providing video instruction of how to disassemble/repair/clean/maintain a firearm, providing written instructions on how to disassemble/repair/clean/maintain a firearm, or distribute copies of service manuals that are not protected by copyright laws - all via the internet. It cannot be truthfully said that the dissemination of technical specifications on any firearms currently available for sale to the public constitutes a risk to the safety of US Military forces or the US Public.

I request that careful consideration of the effects of these changes be made to insure that The People's Freedom of Speech is not infringed and that assurances be provided in the language of the rule to The People that our liberties are not being challenged. Great care should be taken to insure that no violations of the 1st (Or, 2nd) Amendment arise as a result of any the proposed changes to ITAR. As an example, if this change were to prevent bloggers, video bloggers, online publications, publications made freely available online, etc from disseminating information, such as available calibers or instructions on how to disassemble a firearm, then it would be a clear violation of our 1st Amendment Right and this change should not be adopted. These changes should instead be modified to protect 1st Amendment Rights, as Protecting The People's Rights should be the chief concern of our government.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

General Comment

(Copy and Paste The Below To the State Department's Comment Page)

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or

not, the First and Second Amendments are still the law of the land!

That's it!

I'll keep you informed of our progress with this matter as we continue to fight these Gun Grabbers!

For Our Freedoms,

President of PreparedGunOwners.com

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them. Give me Liberty or give me death.

P.S. About 15 years ago, a burglar broke into my condo on the 5th floor. He was about 250 lbs, black and with his hands full of some of our stolen items in our condo. I am only about 5 feet - 6 inches tall, and about 150 lbs. I was only able to chase him out of our condo with an iron barbell that I had under my bed. Back then it was the only weapon I had. Needless to say, after that horrifying experience, I now own a pistol and I keep it in short distance from my bed, but safely up at the top of a shelf. I will not sleep without it...to protect my wife and myself....ever again. "You will have to pry my gun from my cold, dead hands"....as somebody once said.

I urge you to repeal these new regulations in their entirety because whether you or anyone else agrees or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

I urge you to repeal these new regulations in their entirety because whether you or anyone else agrees or not, the First and Second Amendments are still the law of the land!

That's it!

I can't believe that this administration continually freely brakes the laws of the land which were put into place so that we could continue to move forward not backwards and things just like this r just another example of what's going to happen after this parties reign is over with . I firmly believe that the law will firmly be enacted when the time comes and reality will hit all of you and hard , "HARD"!

Comment on DOS-2015-0023-0001

Submitter Information

Name: BRADLEY ANDERSON

Address: United States,

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

This government did not mind my skill with and use of firearms in the 20 years of my US Army career. This veteran feels this new regulation update is an insult to my character and my steadfast love of this country.

Also, the casual communication with a friend concerning an owned firearm is covered by the First Amendment of the U.S. Consitution. How does this government figure it has to right to modify/restrict a citizen's right to free speech? It doesn't involve any antigovernment conspiracy.

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone else agrees or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

Sincerely,
Linda Eberline

(Copy and Paste The Below To the State Department's Comment Page)

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

To whom it may concern:

I strongly oppose the rewrite of the State Departments arms control regulations (ITAR), which could potentially grant the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this provision in danger of facing decades in prison and massive fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama administration as requiring, not only government permission, but potentially a government license. This means violators would potentially face significant criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-veiled effort to ban 3-D printers.

I urge you to repeal these new regulations in their entirety. Whether you like it or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone else agrees or not, the First and Second Amendments are still the law of the land!

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

Signed,
Gloria Merriman
Freedom Loving American

ITAR would take away freedom of expression for law-abiding citizens; levying fines and making them CRIMINALS. It will not alleviate violence - it will only increase the size (and cost) of government and its reach into our lives.

The First and Second Amendments also give us transparency - for knowledge and discussion, and that is very important, too.

Comment on DOS-2015-0023-0001

Submitter Information

Name: Stewart Hink

General Comment

To whom it may concern:

I strongly oppose the updates to the State Departments arms control regulations (ITAR), which could potentially give the State Department a wide-ranging power to monitor and control gun-related speech on the Internet.

These new rewrites strongly infringe upon every American's first AND second amendment rights ...

The new language -- which includes making technical data available via a publicly available network (e.g., the Internet) -- could put anyone who violates this (very broad) language in danger of facing decades in prison and crushing fines.

So posting information on virtually any firearm or ammunition could be defined by the Obama (or any future) administration as requiring--not only government permission--but also potentially a government license. And violators could face serious criminal penalties.

I also oppose the addition of the word software into these regulations, as it appears to be a not-so-subtle effort to affect 3-D printers and the software that is utilized by them.

I urge you to repeal these new regulations in their entirety because whether you or anyone elses agrees or not, the First and Second Amendments are still the law of the land!

That's it!

I'll keep you informed of our progress with this matter as we continue to fight these Gun Grabbers!

For Our Freedoms,

President of PreparedGunOwners.com
